The 2024 wildland fire season is well underway; roaring actually. 22,185 fires have already burned 2,736,981 acres. the number of fires is slightly less than this time last year [24,937], acres burned is about four times more; +2,039,726 acres. The 2024 fire season is on pace to be one of the most destructive in recent memory. Projections indicate at the current pace, about 9 million acres will burn in 2024. The ten-year average is 28,085 wildfires burning 2,155,727 at the same time this year. This *A Call to Action*, started almost four years ago, is an attempt to keep a National Emergency of wildfires at the forefront of the American people. To date, 78 professionals [and counting] have contributed to this *A Call to Action*. Sign-on to the *Petition* [Petition Link: <http://chng.it/bGsyZvSb>]. As of July 7, 2024, there are 5,818 signatories. Also, please see the posting on [Evergreen Magazine](#) [please be patient for the positing of this latest revision]. A dominant them of *A Call to Action* is “First, Put Out the Fire.” This in currently in direct opposition to the USDA Forest Service and their concept of “[managed or beneficial wildfire](#).” For example, notable incidents include the recent Blue and Blue 2 Fires in New Mexico. Check out this sequence: 5/17/2024 = start, “monitoring”; 5/19/2024 = 10 acres burned. 5/31/2024 = 7,457 acres! This is not surprising. *Monitoring* is not a strong Initial Attack. Please, continue to review the concept of “managed or beneficial wildfire.” Putting all fires out immediately is cost effective; large fires are unimaginably expensive and destructive. Annual damages from wildfires are approaching \$1 trillion! Maybe it is time for a renewed, more contemporary “10 AM” policy by the USDA Forest Service. Let us not forget that smoke is also a horrendous killer. So, for now, it is critical to put all wildfires out quickly with an aggressive Initial Attack. The 2024 Annual Chief’s Letter of Intent is out! None of the [National Wildfire Institute \[NWI\] and Others](#) six [recommendations](#) were included. Please see [Appendix A.54](#). It’s a must read. Also, check out page 6. It includes “...some really important stuff.” America’s forestlands are at risk; lack of forest maintenance is a key culprit. [What if forests could speak?](#) Please get involved to alter the direction of this destructive force – uncontrollable wildfires. *A Call to Action* is continually updated. **This is Revision 17.9.** Just click on the following two *hyperlinks* to see the latest versions:

REV. 17.9

A Call to Action

In 2001, when “Managing the Impacts of Wildfires on Communities and the Environment” -- the *National Fire Plan*² – was completed, there were about 38 million acres of our national forestlands [forests are more than just trees] classified as high risk to fire. It is now about 90+ million acres. Why? Because for at least the last three decades, we have significantly underfunded forest maintenance [*aka*, forest management] work that could help restore the health and resiliency of our forested landscapes and help prevent large, intense wildfires. By shifting money *from* sustainable forest maintenance actions *to* fire suppression, today’s forests have become overgrown and act like tinderboxes. Federal forests call for at least 8-9 million acres to be restored annually for the next decade, including timber harvesting, fuel reduction, thinning of non-commercial sized trees, various fish and wildlife habitat improvement projects and plantings; about 20 million acres per year for all forestlands.

These are different times. With the current land conditions and the impacts of a changing climate, the idea of allowing a wildfire to burn anywhere, for whatever reason, is unacceptable and must be stopped; no exceptions. Check out again the earlier contribution sustained in this revision of *A Call to Action*, including, the extremely instructional interview between Jim Petersen and Frank Carroll [[Appendix A.45](#)]; it’s a classic and will continue in this revision.

¹ Coordinated by Michael T. Rains with input from a wide-range of professionals; 78 and counting.

² Michael T. Rains, USDA Forest Service [ret.]. Lead Author, US Department of Agriculture. 2001.

This latest revision of *A Call to Action* is again being sent far and wide to decision-makers – members of the current Administration and Congress; County leaders; and more. Please, share your voice so we can begin to alter the direction of this destructive force – uncontrollable wildfires. As usual, I urge all of you to not be confused by the intellectual argument that wildfires are helpful to ecosystem health. At this point in time, wildfires are not. The current landscape scale conditions, especially in the western part of America, will not allow the “managed” or “beneficial” fire concept to work effectively; it’s simply too dangerous, wildfires will escape the “managed” fire “containment zone.” To make it easier for the reader, we have created a “Graphic Organizer.” Put your cursor in the desired box and “click”. Detailed information from *A Call to Action* will come up.
